Summary

Computer Science graduate (B.Sc., June 2026) and Samsung Innovation Campus Big Data graduate. Builds batch and streaming pipelines with Kafka, Spark, Airflow, Snowflake, and dbt, backed by solid SQL, Python, and Power BI, plus industry experience automating banking workflows over SQL Server.

Education

Arab Academy for Science, Technology and Maritime Transport **Cairo, Egypt**
B.Sc. in Computer Science *Sept 2022 – June 2026*
GPA 3.66/4.0 (Excellent) — Dean's List: Semester 2, 2022–2023 (GPA 3.9)
Graduation Project: DocMind – A+ (Excellent)

Experience

Intern – Finnovate (ICT Misr Group) *Cairo, Egypt*
Business Process Automation & Core Banking *July 2026 – Sept 2026*
Built BPM solutions on Nintex K2 for banking clients, modeling business entities and relationships over SQL Server. Developed FastAPI services consumed by K2 forms to serve policy data and handle document storage, and implemented a four-department maker-checker approval workflow for corporate loan origination.

Training & Courses

Big Data Engineering Track – Samsung Innovation Campus (SIC 8) *June 2026 – Oct 2026*
Completed a data engineering scholarship covering Hadoop, Hive, Spark, Kafka/Flink streaming, NoSQL, warehousing, cloud (AWS, Azure, Databricks, Fabric), and DataOps/MLOps, with hands-on labs in Snowflake + dbt, AWS Glue, Flink SQL, MLflow, and GitHub Actions CI.

Data Analytics Track – Digital Egypt Pioneers Initiative (DEPI) *June 2025 – Jan 2026*
Government-sponsored program covering SQL, ETL, DAX modeling, and Power BI; delivered 4 KPI dashboards.

Projects

Smart Grid Monitor – Kafka, Spark, Snowflake, dbt, Airflow *SIC Final Project, 4-person team*
Real-time smart-meter system, motivated by Egypt's load shedding, that detects **electricity theft** and warns of **transformer overload**. Readings stream through Kafka into PySpark, land in Bronze/Silver layers on **AWS S3**, and are modeled in **Snowflake with dbt**. **Owned orchestration, BI, and cloud:** the **Airflow** DAG, the Power BI dashboard, and a least-privilege AWS setup for the team.

Customer Churn Data Pipeline – Hadoop, Spark, Hive *SIC Project, 4-person team*
Pipeline turning 4 sources (MySQL, CSV, JSON) into a warehouse for **10K bank customers** via Sqoop, NiFi, HDFS, and PySpark. **Owned the warehouse, KPI, and orchestration:** a partitioned Hive table over Parquet, a monthly churn KPI with window functions, and one idempotent script running all 7 stages in **6m 37s** with zero row loss.

F1 Pit Stop Performance Analysis (2018–2024)
Analytics pipeline over **28K+ records** with Python and Power Query on a **star schema**, feeding multi-page **Power BI** dashboards on drivers, constructors, and tire strategy.

F1 Season Winner Prediction – XGBoost + Streamlit
XGBoost classifier predicting the season champion from consistency and pit-stop features, deployed as a **Streamlit** app with ranked win probabilities.

Awards & Competitions

Egypt Collegiate Programming Contest (ECPC) *Summer 2023*
1st place in college qualifiers; national competitor in algorithmic problem solving.

Skills

Big Data & Streaming	Spark (PySpark), Kafka, Flink, Hadoop/HDFS, Hive, Sqoop, NiFi, Parquet
Cloud & Warehousing	AWS (S3, Glue), Snowflake, dbt, Databricks, Microsoft Fabric, Star Schema Modeling
Orchestration & Ops	Airflow, Docker, Git/GitHub, GitHub Actions (CI), MLflow, Linux
Programming & DBs	Python (pandas, numpy, scikit-learn), SQL, Java, PostgreSQL, SQL Server, MySQL
BI & Analytics	Power BI, DAX, Power Query, Excel, Streamlit, FastAPI
